

CLINISCOPE

Healthcare Record Contradiction Detector

Find the conflict. Trace the evidence.
Keep humans in control.

Helping reviewers identify potentially conflicting information across healthcare records and trace the evidence behind each finding.

POTENTIAL CONFLICT · 2 VERIFIED SOURCES

SENT TO HUMAN REVIEW

Illustration · synthetic data

The challenge: conflicting information across clinical records

01 Fragmented information

Relevant information may be spread across multiple records.

02 Conflicting statements

Two records may disagree about the same clinical fact.

03 Manual comparison

Reviewers may have to read and compare documents by hand.

04 Limited traceability

A useful finding must point to the exact source statements.

ILLUSTRATIVE EXAMPLE · SYNTHETIC

RECORD A

Discharge summary

Medication status
active

RECORD B

Medication list

Medication status
discontinued

≠

MULTIPLE RECORDS

→ INCONSISTENT STATEMENTS

→ REVIEW REQUIRED

A difference is not always an error: dates and context may explain it. A qualified reviewer decides.

CLINISCOPE turns discrepancies into reviewable evidence

PRINCIPLE

- **Detection is the beginning. Evidence and human review are essential.**

* AI-assisted reasoning runs through the optional server. It is implemented and tested with a stand-in provider, not yet with a live model. CLINISCOPE never diagnoses or recommends treatment.

A traceable pipeline from documents to human review

Technology chosen for a practical, extensible implementation

Verified in package.json, source imports and the CI workflow.

FRONTEND

React 18

TypeScript

Vite

Tailwind CSS

Single-page review interface with hash routing for static hosting.

DOCUMENT PROCESSING

pdfjs-dist

Tesseract.js 6

mammoth

PDF text layer, on-device OCR and DOCX extraction in the browser.

DATA & PERSISTENCE

Dexie

IndexedDB

Local cases, original files, findings and an append-only audit log.

TESTING

Vitest

Playwright

fake-indexeddb

Unit, integration and end-to-end tests, incl. OCR and two-user flows.

BUILD & DELIVERY

GitHub Actions

GitHub Pages

Each push type-checks, tests, builds, deploys and re-tests the live site.

OPTIONAL SERVER LAYER · NOT PUBLICLY DEPLOYED

Node 22 · node:sqlite · Anthropic SDK + Zod · Docker / Render config

Adds sharing and AI only where configured.

A practical foundation with a clear path to extension

KEY POINT

Present in code is not tested, and tested is not clinically validated.

Designed to grow responsibly with clinical review needs

RESPONSIBLE SCALING REQUIRES

Privacy

Access control

Data protection

Auditability

Clinical evaluation

Human oversight

Uncertainty handling

Error monitoring

IMPACT

Potential impact must be demonstrated through evaluation, not assumed.

From scattered records to traceable contradictions

1

IDENTIFY

Surface potentially conflicting statements.

2

TRACE

Connect findings to their source evidence.

3

REVIEW

Help humans investigate and decide.

Find the conflict. **Trace the evidence.** **Keep humans in control.**

TRACEABLE FINDING → HUMAN REVIEW
